PROFESSIONAL SUMMARY

CS graduate from Rutgers University with GPA: 3.9 and Dean's List, who ships production-ready software. Built ML dashboards, AI-integrated web apps, and a full airline reservation system with role-based access control. Maintained 100% uptime across 100+ live events for 9,000+ daily users. Strong across the full stack. Ready to contribute from day one.

TECHNICAL SKILLS

Languages: Java, Python, C, C++, C#, JavaScript, SQL, Swift

Web & Backend: Node.js, Express.js, FastAPI, React, REST APIs, HTML, CSS

Databases: MySQL, MongoDB, JDBC, SQL Query Optimization, Data Modeling

AI / ML: scikit-learn, pandas, NumPy, OpenAI APIs, Generative AI, Jupyter Notebook

Cloud & DevOps: AWS (EC2, S3), Docker, CI/CD, Git, GitHub, Linux/Unix, Bash, Agile/SDLC

EDUCATION

Bachelor of Science, Computer Science — Rutgers University, New Brunswick, NJ

Sep 2024 - May 2026

GPA: 3.9 | Dean's List | Coursework: Data Structures & Algorithms, Data Science, Systems Programming, Internet Technology, Computer Security

Associate of Science, Computer Science — Middlesex College, Edison, NJ

Jan 2023 - Jun 2024

GPA: 3.8 | Dean's List (All Semesters) | Phi Theta Kappa Honor Society

EXPERIENCE

Computer Science Teaching Assistant

Sep 2025 – May 2026

Rutgers University — CS 512: Design & Analysis of Algorithms

New Brunswick, NJ

- Graded 50+ assignments/cycle for 200+ students with faculty-aligned rubrics; identified the 3 most common algorithm errors and ran targeted fix sessions that cut repeat mistakes by ~20% in subsequent submissions.
- Authored complete LaTeX solution sets (max-flow, NP-hardness, ILP, Kruskal's) and held weekly office hours, raising average assignment scores semester-over-semester.

Building Operations Manager

Apr 2025 – May 2026

Rutgers University — Campus Facilities

New Brunswick, NJ

- Sole IT lead for a 61,000 sq. ft. facility with 9,000+ daily visitors with zero critical failures across 100+ events over 13+ months via pre-event audits and real-time monitoring.
- Maintained 100% uptime on 30+ Windows/Linux workstations; cut avg. resolution time by 25% by creating documented troubleshooting runbooks for the student ops team.

PROJECTS

AeroSync — Airline Reservation System | *Java, Swing, MySQL, JDBC, OOP*

May 2026

- Architected a 3-tier desktop reservation system with role-based access control across Admin, Customer Rep, and Customer roles supporting flight search, seat booking, and automated waitlist management.
- Designed a fully normalized MySQL relational schema with JDBC integration; implemented transaction handling and data integrity constraints across all booking and cancellation flows.

Spending Insights Dashboard | *React, FastAPI, Python, pandas, scikit-learn, Recharts*

Apr 2026

- Built a full-stack ML financial dashboard: FastAPI + pandas backend ingests raw CSVs, scikit-learn model achieves 85%+ forecast accuracy on next-month spend predictions.
- Developed React/Recharts frontend with anomaly detection alerts, interactive trend charts, dark presentation mode, and one-click PDF export for non-technical stakeholders.

SmartPantry — AI Recipe Generator | *Node.js, Express.js, MongoDB, REST API, OpenAI API*

Feb 2025

- Developed and deployed a full-stack web app integrating barcode scanning and object recognition APIs to deliver personalized recipe recommendations to users.
- Implemented RESTful API endpoints and optimized MongoDB schemas for scalable data modeling, supporting fast queries across recipe and pantry datasets.
- Demoed live to 100+ attendees at HackRU 2025, presenting both the technical architecture and user-facing features to a panel of industry judges.

Fashion Trend Analysis & Recommendation System | *Python, scikit-learn, pandas, NumPy*

Dec 2025

- Engineered pandas/NumPy feature extraction workflows, cutting data-cleaning time by 30%; improved classification model accuracy by 18% through cross-validation and hyperparameter tuning.
